

Odour Eliminator

Item #: 123

PROBLEM : Need to freshen up the room and get rid of bad smells, but don't want to use chemical-laden aerosol air-fresheners?

SOLUTION : Odour Eliminator from Norwex is an enzyme-based, organic odor-remover that can be sprayed in the air, around or on the source of the odor. Odour Eliminator works to remove the source of the odor, rather than simply masking it.

Description:

Odour Eliminator is an excellent, enzyme-based deodorant for use in bathrooms, kitchens, garbage cans, disposal bins, lockers and changing rooms. It removes unpleasant organic odors and leaves a fresh, clean scent. The bacterial spores in Odour Eliminator work to eat up the organic matter causing the odor. Odour Eliminator eliminates the source of unpleasant odors such as mildew, smoke and garbage, leaving a fresh, clean smell.

Highly concentrated, use diluted.

355 ml / 12 fl. oz.

Key Features:

- Chemical-free odor elimination
- Based on natural enzymes
- Effective against mildew, smoke, garbage and waste odors
- Highly concentrated
- Pleasantly scented fragrance
- Phthalate-free
- Container is recyclable, HDPE #2.
- Non-aerosol container

Key Benefits:

- Freshens instantly
- Actually eliminates odors, rather than simply masking them
- Leaves a fresh, clean scent
- Leaves no residue and will not stain
- Biodegradable
- Non-toxic
- Non-flammable
- No aerosol propellants

How to Use:

- Shake well before using.
- Use anywhere unpleasant odors present a problem. May also be used with rug shampoo solutions to eliminate odors in carpets. A few ounces in mop water leaves a fresh smell.
- Use a capful per each wash load for a clean-smelling laundry.

- As a spray: For best results, always spray diluted. Mix 1 part Odour Eliminator to 7 parts water (which is 2 Tbsp per cup or Norwex Spray Bottle) and spray where offensive odors exist. Direct a light mist toward the ceiling, allowing it to completely refresh the area.
- Floor mopping and carpet extraction: Add 1 part Odour Eliminator to 40 parts rug shampoo solution (slightly less than 2 Tbsp/L).
- DO NOT mix with other cleaning chemicals such as bleach or disinfectants.
- Avoid using extremely hot water with the product.

Demo Tips:

- Measure 2 Tbsp of Odour Eliminator into a Norwex Spray Bottle and fill it with water. Use it during Home Parties to demonstrate the light, fresh scent. Point out that the 12-ounce container will last a long time. Because the product is concentrated, a little goes a long way!
- Odour Eliminator makes a great replacement for aerosol air fresheners.

Did You Know?

- Enzymes are proteins that act as biological catalysts, meaning that they are molecules capable of speeding up chemical reactions. They bind to the reactants in a chemical reaction and assist in the reaction without being changed at all themselves.
- Phthalates are EDCs—endocrine-disrupting chemicals—which are found in many air-freshening products. They can adversely affect development and reproductive systems.
