

# Car Wash Mitt

Item #: 308030

**PROBLEM :** Using chemicals to get your car clean isn't good for you or the environment. In addition, you (or a car wash facility) could risk scratching your car if the wrong tools are used. Regular cotton cloths and towels aren't a good option because they can't pick up as much dirt, which means you may have to use several of them—and lots of water—to do the job well.

**SOLUTION :** The Car Wash Mitt gets your car clean and streak-free without scratching, using just one bucket of water. The thick chenille microfiber gently lifts dirt and grime up high and away from your car's surface. And no harmful chemicals are washed into storm drains, which means a healthier environment for us all.

## Description:

The two-sided Car Wash Mitt has nubby chenille microfiber on one side and sponge layer microfiber on the other to collect dirt and debris. It washes out easily with just a quick rinse, and the handy loop facilitates quick drying.

Size: 23cm x 17cm / 9.06" x 6.69"

## Key Features:

- Thick, plush fibers hold dirt and grime away from your car's surface to reduce scratching.
- Open spaces in the fibers created by the splitting process in manufacturing allow the mitt to lift away maximum dirt and grime.
- Super absorbent, so you can clean your entire car using just one bucket of water
- Rinses clean with just water
- Unique mitt design fits either hand.

## Key Benefits:

- Enjoy a shiny clean car with less water and no chemicals
- No need for harsh chemicals that can harm the environment
- Saves money by eliminating expensive car-cleaning products
- Saves on your water bill by using only a single bucket of water
- Eliminates residual "chemical muck" left behind by typical cotton cloths and cleaning products
- Traps dirt and grime in the mitt and leaves the surface of your car cleaner, so you may not need to clean as often

## How to Use:

- It's best to hose the vehicle down from top to bottom to remove larger particles of dirt and grime. However, you can also wash your car with a single bucket of water.
- Wet the Car Wash Mitt and wring it out well. Then use the mitt to wash a quarter of the exterior of the vehicle at a time, working your way from top to bottom. Rinse the mitt as needed.
- Finish by drying each section of the vehicle as you go with the Car Cloth. Don't forget the wheel rims!
- Slightly dirty microfiber can be washed with Norwex Dishwashing Liquid under warm running water and used again before laundering. Rinse thoroughly after washing and air or machine dry.

- Cloths that have been used heavily should be laundered using Norwex Ultra Power Plus™, which contains no fillers, after each use. Do not use bleach, fabric softeners or dryer sheets.

## Demo Tips:

- Share how the Car Wash Mitt can usually get the entire car clean with just a single bucket of water.
- Point out that the Car Wash Mitt even works on grimy, oily wheel rims, all with just one bucket of water—and NO chemicals!

## Did You Know?

- During the manufacturing splitting process, the microfiber is split into very thin strands, each a fraction of the thickness of a human hair. When woven together, these strands now have a much larger surface area covered with millions of spaces between the fibers to trap maximum moisture, dirt and debris.
- A standard garden hose produces about 10 gallons per minute. This means that a 10-minute car wash can use up to 100 gallons of water if you leave your hose running.
- You can use Leather Shine on your car's wheels to make them look almost new!

All Norwex Microfiber products carry a two-year warranty. Please visit [www.norwex.com](http://www.norwex.com) for complete details.

## COMPLEMENTARY PRODUCTS

- Car Cloth
- Spray Bottle
- Leather Shine
