

Fluff and Tumble Dryer Balls

(Set of 3) Item #: 357021

PROBLEM : Your clothes never seem to dry all the way, creating longer dry times. To make matters worse, they come out of the dryer wrinkled and full of static electricity. And using dryer sheets or fabric softeners isn't an option because they can cause harm to your dryer, not to mention the environment, with all those chemicals.

SOLUTION : The Fluff and Tumble Dryer Balls reduce dryer time, wrinkles and static by creating space between your clothes as they are tossed gently in the dryer, allowing more air to circulate between and among them. And, what's even better, they don't contain chemicals or dryer-harming ingredients like most dryer sheets and fabric softeners.

TOP SELLER

Description:

Fluff and Tumble Dryer Balls are a natural fabric softener you use in your dryer. They bounce around to naturally separate and create space between your laundry, allowing the hot dryer air to circulate better and soften fabrics. Made of 100% wool, they help reduce drying time, static cling and wrinkles, all naturally, without chemicals. Use them instead of fabric softener or dryer sheets and radically reduce chemicals in your home.

Key Features:

- Made of 100% New Zealand wool
- Softens naturally
- Reduces drying time by 25%
- Helps eliminate wrinkles
- Helps reduce static
- Guaranteed for 1000 loads
- No chemicals

Key Benefits:

- 100% eco-friendly
- Safe for all clothes
- Saves time, energy and money
- Replaces the need for dryer sheets and fabric softener!
- Can be left in the dryer; they won't melt.
- Quieter and more natural than plastic dryer balls
- Excellent for use with pure essential oils for scented laundry
- Dryer sheets and softeners have chemicals and waxes that can kill a dryer's heating element.
- Softeners/dryer sheets cause wax buildup on the lint catcher so hot moisture cannot escape the dryer, which could burn out the heater.

100% Wool

- Wool is a sustainable resource and naturally biodegradable. Our Fluff and Tumble Dryer Balls are 100% wool to the core and hand-spun tightly. They will last up to two years, 1000 loads, in your dryer.

How to Use:

- Simply toss the dryer balls in your dryer and start. No need to remove them from the dryer, just reuse!
- Try them with a drop or two of pure essential oil for heavenly scented laundry. After the laundry is completely dried, take out 2 of the Fluff and Tumble Dryer Balls and apply desired amount of pure essential oil to each ball. Toss the 2 back into the dryer with the other one and run on Air Fluff (no heat), so the delicate oil is not damaged, for 10 minutes. Your laundry will smell heavenly, and the scent will linger for several days!

Demo Tips:

- Pass the Fluff and Tumble Dryer Balls around at the party. Ask guests if they use or have used dryer balls in the past? Let them know that 100% wool dryer balls reduce drying time by 25%, are 100% natural and reduce static.
- Tell guests that Fluff and Tumble Dryer Balls are MUCH better than fabric sheets and softeners, which are loaded with chemicals that are not only harmful to the environment—they are harmful to people as well.

COMPLEMENTARY PRODUCTS

- Ultra Power Plus™ Laundry Detergent
- Stain Remover
- Washing Net

Did You Know?

- Although they make your clothes feel soft and smell “fresh,” fabric softeners and dryer sheets are some of the most toxic products around. They add toxic chemicals to your laundry and, consequently, your body. Plus, it can take YEARS for a dryer sheet to break down in landfills.
- According to *Scientific American*, some of the most harmful ingredients in dryer sheets and liquid fabric softeners alike include benzyl acetate (linked to pancreatic cancer), benzyl alcohol (an upper respiratory tract irritant), ethanol (linked to central nervous system disorders) and chloroform (a neurotoxin and carcinogen), among others. Since fabric softeners are designed to stay in your clothes for extended periods of time, such chemicals can seep out gradually and be inhaled or absorbed directly through the skin.
