

## Descaler **TOP SELLER**

Item #: 403421

**PROBLEM :** Hard water can cause unsightly lime and calcium deposits on kitchen and bathroom sinks, fixtures, bathtubs and shower doors. And rust can leave ugly stains on taps, drains and tiles. Common descalers are not the answer. Most contain large quantities of toxic surfactants and dangerous chemical acids that can burn surfaces and damage the environment as they attempt to break down mineral stains.

**SOLUTION :** Norwex Descaler is both highly effective and environmentally friendly. It provides heavy-duty cleaning and removal of calcium, lime and rust stains as well as stubborn, stuck-on soap scum—in just a few minutes!

### Description:

Norwex Descaler consists of natural Glucuronic Acid to remove mineral deposits, dirt and soil. Organic Orange Peel Extract and Sodium Gluconate help enhance the cleaning ability of the product.

350 ml / 11.8 fl. oz.

### Key Features:

- Removes soap scum, lime/scale, calcium and rust stains
- Removes hard-water stains around taps and drains
- Includes natural ingredients
- Non-flammable
- No animal testing
- Non-aerosol pump
- Container is recyclable, HDPE #2.

### Key Benefits:

- Leaves taps and drains clean and sparkling like new
- Works on a variety of surfaces, including shower doors, shower curtains, shower stalls, bathtubs, sinks and drains
- Works well on porcelain, ceramic tile, fiberglass, glass, stainless steel, aluminum, vinyl and plastic
- Removes mineral stains where water has consistently dripped on a surface
- Removes water marks from glass and tiles where water has evaporated, leaving minerals to stain the surface
- If used regularly, lime buildup can be avoided
- Contains no aerosol propellants

### How to Use:

- Spray Descaler on the surface, and let it work for five to ten minutes. Wipe off with a moist EnviroCloth® or Scrubby Corner Cloth before the surface dries. For heavier stains, repeat the process. When used regularly, Descaler will prevent buildup of mineral stains.

*WARNING: Do not use on natural stone, such as granite, marble or terrazzo; painted surfaces; metallic glazed surfaces; cast iron; copper or unsealed grouted areas as the natural acids may damage the surface. Not for use in coffee makers or any food-ware product. Always test on an inconspicuous place before using.*

### Demo Tips:

- Before the party, ask your Host if she has a shower door with hard water stains. If so, ask her permission to use the stained door as a demo during the party. During the party, spray Descaler on the stained door; wait five to ten minutes and wipe clean with a Norwex cloth.
- Before the party, ask your Host if she has tile flooring with sealed grout in her home. If so, ask her if there is an area where the grout may have become discolored or dirty. During the party, spray Descaler on a small section of the dirty grout; wait five to ten minutes and then wipe clean with an EnviroCloth or Scrubby Corner Cloth.

### Did You Know?

- “Scale” or limescale, also known as calcium carbonate, is the milky white substance that can collect around faucets and drains. It results from mineral deposits left by hard water. It’s difficult to remove without using abrasives, which could damage the finish of the surface. The natural acids in Descaler make it just right for the job!

60-day warranty
